

CONTENTS

1) Introduction

- introduction on standard model of particle ($U(1) \times SU(2) \times SU(3)$)

2) Proton-Proton scattering

- Hadronic cross section
- Partonic cross section
- Parton Distribution Function (PDF)

3) Multiparton Interaction & Beam-Beam remnant and Pythia

- Why need Multiparton interactions
- ISR-MPI-FSR in Pythia8
- What is left? Beam-Beam remnants
- Fermi-Motion \Rightarrow Primordial kT
- Color reconnection range
- After that? Hadronization...

4) Underlying event in proton-proton scattering

5) Observable to study the underlying event and multiple Interaction

6) Neural Nwtwork & MCNNTUNES

- What is tune?
- What is MCNNTUNES?
- Neural Network introduction

7) CP5 and our tune

- Introduction to CP tunes
- Our work on Minimum Bias events
- Our tunes

8) Primordial kT

- Introduction on PrimordialkT on pTZ observation
- Our result on Primordial kT in pTZ measurament
